

# Use Guidelines for SPV Soils

## Raised Garden Bed Mix

**Attention: Our Compost-based Growing Media Requires the Addition of a Nitrogen Supplement For Optimum Plant Development!!**

San Pasqual Valley Soils Raised Garden Bed Mix was designed to be high quality, low cost basic growing media for raised garden beds supplying a wide range of essential “slow release” plant nutrients but with limited available “nitrogen”. Because of the high “compost” content of this growing media, supplemental Nitrogen must be added to support optimal plant growth and development. There are many sources of nitrogen available and we leave that choice up to our customers. Whatever nitrogen source you choose, for best results please follow the application rates on the package label for the specific plant type you are growing.

**Two recommended nitrogen sources we currently offer for sale are synthetic Sulfate of Ammonia (21% Nitrogen) and Feather Meal (12% Organic Nitrogen).**
